TEACHING EXPERIENCE

MEEN 689 Generative Machine Learning for Engineering and Design

Generative machine learning techniques, from classical generative models to deep generative models that power modern generative AI. Topics include directed and undirected graphical models, variational autoencoders (VAEs), autoregressive models, normalizing flows, energy-based models, diffusion models, generative adversarial networks (GANs), and a survey of the latest research on generative machine learning in the engineering domain.

MEEN 423 Machine Learning for Mechanical Engineers

Machine learning techniques with applications to the analysis and design of mechanical, fluid, thermal, material and multidisciplinary systems; linear and kernel support vector machines; neural networks; Bayesian techniques; decision trees and random forests; dimension reduction and model selection; data management and learner validation strategies; tools and application studies.

MEEN 401 Introduction to Mechanical Engineering Design

The design innovation process; need definition, functional analysis, performance requirements and evaluation criteria, conceptual design evaluation, down-selected to an embodiment; introduction to systems and concurrent engineering; parametric and risk analysis, failure mode analysis, material selection, and manufacturability; cost and life cycle issues, project management.
